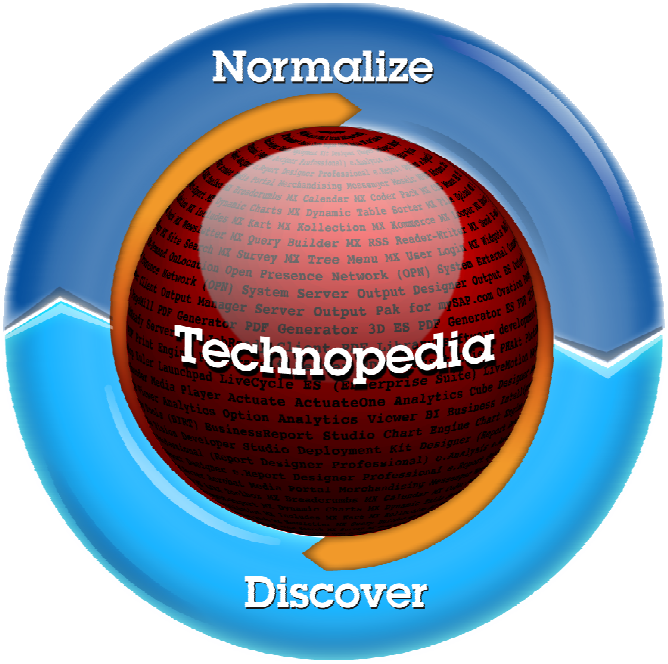
BDNA

The BDNA Solutions

BDNA Technopedia™ is the continually evolving, definitive guide to IT hardware and software – the complete reference for over 150,000 software releases and 170,000 hardware models, augmented with over 15 million market data points

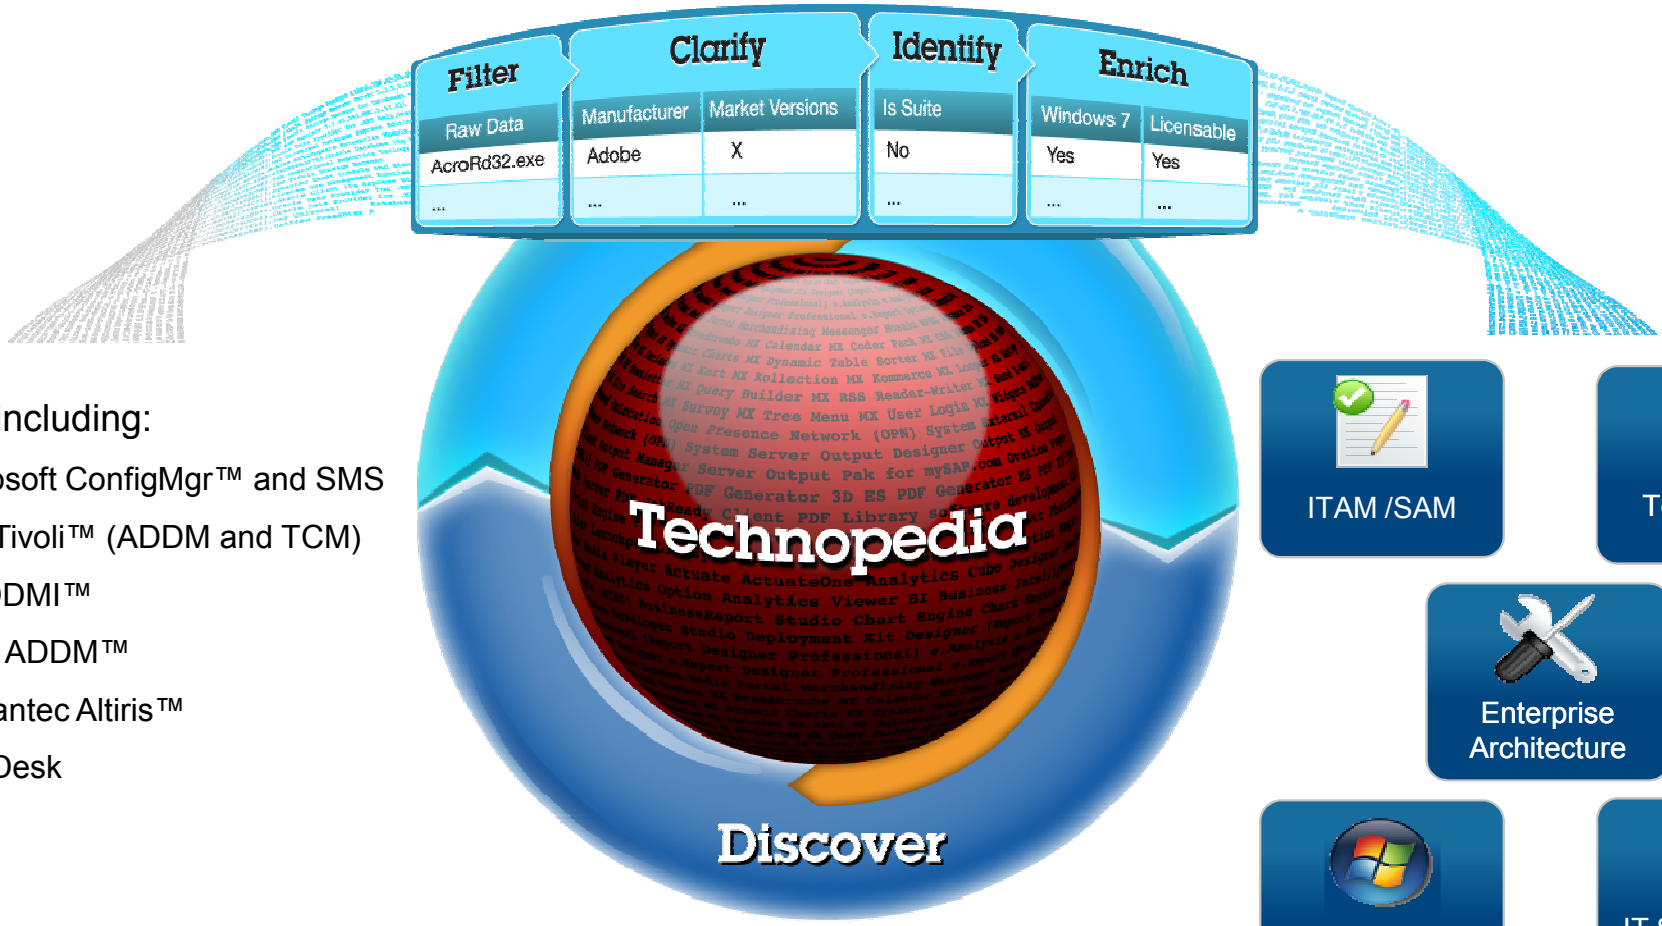


BDNA Normalize leverages Technopedia, to enable confident, informed decisions

BDNA

Normalization: Data to Information

The normalization process **filters** discovered hardware and software data, **clarifies** manufacturer names, **identifies** suites and **enriches** it with non-discoverable market data such as Windows 7 compatibility, end of life dates and licensability



Sources including:

- Microsoft ConfigMgr™ and SMS
- IBM Tivoli™ (ADDM and TCM)
- HP DDMI™
- BMC ADDM™
- Symantec Altiris™
- LANDesk

ITAM /SAM

Technology Refresh

Enterprise Architecture

Windows 7 Migration

IT Service and Supportability

For Microsoft System Administrators looking to save hundreds of hours of scripting, writing queries and improving accuracy, **BDNA Normalize for ConfigMgr™** (Normalize CM) is the solution that provides actionable information inside the familiar SCCM environment.
